With translation service

TreC is a territorial Personal Health Record, an electronic platform that enables citizens of the Autonomous Province of Trento to access, supplement, manage and share their health and wellbeing information. Conceptualized and designed by Fondazione Bruno Kessler through a public funded three-year project (2008-2010), TreC addresses three of the main challenges of mature healthcare systems:

- ✓ Providing services to citizens
- ✓ Providing self-tracking tools for wellbeing
- ✓ Providing tools for improving care of chronic disease
